Main

- Vector<IClassTester>
- Vector<ITestResult>

IClassTester

- IClassTester(ILogger)
- ITestResult Test()
- ILogger

ILogger

- Log(string message)

Main contains a vector of ClassTesters that are iterated over, calling their Test() function and storing the ITestResults in another vector. The Test() function itself handles logging of the results by using the ILogger, but defers to Main/Executor to do any other logic based on the results, such as retries, filtering, reports, etc.
